The concepts and definitions used are available upon request from Regional Statistics Section
Manufacturing & Primary Industries Division.

Manufacturing industry data available in CANSIM have been compiled as defined for the 1969
Census of Manufactures. Certain head offices which in the earlier years have classified at
the industry group level have over time been included with those head offices classified to indivi-
dual industries; beginning with 1970 all head offices are classified to individual industries.

Series starting with a "5" have been terminated and are combined for all years with the correspond-
ing industries in the series which begin with a "3". S.I.C. 107 is combined with S.I.C. 105.
S.I.C.'s 1011, 1012 and 1013 are combined into S.I.C. 101. S.I.C.'s 1391 and 1392 are combined
into S.I.C. 139. S.I.C. 3993 is combined with S.I.C. 3999.

The S.I.C. codes have been built into the series number in all cases.

A. National Wealth And Capital Stock

STOCKS AND FLOWS OF FIXED NON-RESIDENTIAL CAPITAL IN CANADA.

1. 1960 SIC

The series given here represent annual estimates of the stocks and flows of fixed non-residential capital in Canada beginning with the year 1926.

The perpetual inventory method which underlies the present estimates starts with annual investment expenditures and estimates of the service lives of the assets. The capital stock estimates for a given year are obtained by accumulating past investment expenditures and adjusting them for the value of investment that has been used up (gross stocks) or adjusting them for the gradual wear and tear and the obsolescence they undergo during the time they are used (net stocks). A comprehensive description of the perpetual inventory method is given in Fixed Capital Flows and Stocks - Manufacturing - Canada 1926-1960: Methodology (13-522), Occasional.

The series are given by major industries according to the 1960 S.I.C., both in constant (1961) and current dollar valuation covering the following detailed types of components:

1. Building Construction
2. Engineering Construction
3. Machinery and Equipment
4. Capital Items Charged to Operating Expenses
5. Total Components

The component series are presented for the following categories of data:

	Current Dollar Valuation	Constant Dollar 1961 Valuation
1. Gross Fixed Capital Formation (GFCF)	Yes	Yes
2. Net Fixed Capital Formation (NFCF)	"	"
3. Capital Consumption Allowances (CCA)	"	"

5. Mid-year Net Stock (MYNS)	"	"
6. End Year Gross Stock (EYGS)	No	"
7. End Year Net Stock (EYNS)	No	"
8. Discards	No	"

NOTE:

The mnemonics appearing at the end of the series title of some 650 series in the Capital Stocks data block, serve to identify the component series of the CANDIDE model which is an undertaking of the Economic Council of Canada.

D. II Private and Public Investment in Canada, Mid-Year Review (61-206), Annual

The matrices listed below contain series representing mid-year forecasts of capital expenditures. Repairs are not included since these data are not revised on our mid-year survey.

For information concerning our Actual, Preliminary Actual and Forecast data on CANSIM see Private and Public Investment in Canada, Outlook (61-205), Annual.

The Canada matrices begin in 1956 with the following exceptions Mining (1192) - 1963, Government departments (1220) - 1968, Private and Public (1224) - 1968, Public (1228) - 1968.

The Provinces and Territories can be retrieved from 1968 (the first year these breakdowns were compiled). Beginning in 1977 these matrices also include data, split between the private and public categories.

For definitions and a brief description of the methods used to collect these data see Section V, Statistical Notes in the publication.

The series in matrix 991 provide monthly data in Urban Centres of 10,000 population and over by category; singles (including cottages), multiples (doubles, rows, apartments and conversions) and total. This monthly data, in dwelling units, is available unadjusted (raw) and adjusted for seasonality at monthly and annual rates.

Matrix 994, these building permits provide the dwelling units by category (singles, cottages, rows, apartments and conversions) for the economic regions in the provinces of Quebec and Ontario. These series, unadjusted for seasonality, are updated monthly on a revised basis only.

Matrix 995 contains the values of building permits, by category, in thousands of dollars, for all economic regions in Quebec and Ontario. These series, as in Matrix 994 are reported monthly on a revised basis only.

XII POPULATION(1)

A. Population Projections for Canada and the Provinces, 1976-2001, (91-520), Occasional

These are Statistics Canada second generation of population projections for Canada and the provinces. They supersede the previous ones which were released in 1974. They are generated by the Statistics Canada Population Projection Model (SCPM) using different hypotheses regarding future trends in fertility, mortality, immigration, emigration and inter-provincial migration. Four series are presented here, from Projections 1 to Projections 4; the base population is the 1976 Census population by age and sex. More information about the general methodology and assumptions is given in Population Projections for Canada and the Provinces, 1976-2001, (91-520), Occasional. Data by individual ages as well as components of growth are also contained in the Publication 91-520 as well as extensions of these projections at Canada level up to 2026.

INTRODUCTION

CANSIM¹ (Canadian Socio-economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. The CANSIM Summary Reference Index is the first step in obtaining series from the CANSIM Main Base. This reference manual summarizes the data bank contents by subject and source publication and provides primary (Matrix) identification numbers which form the key to the second reference manual, the CANSIM Main Base Series Directory, which lists the entire 275,000 time series contained in CANSIM in matrix number order. A "matrix" in CANSIM contains a group of related time series and is equivalent to a "table" in a publication.

As shown in the "Guide to Effective Use of the CANSIM Main Base Series Directory" on Page iv, the Directory contains titles and descriptive detail for each matrix and its component series. There are two identifiers for each series on the CANSIM Main Base: the series number to the left of the series title combines with the matrix number to form the CANSIM Identification Number, while the number at the right is the Databank Identification Number. Either the CANSIM or Databank identifier may be used to retrieve a series from the CANSIM Main Base.

NOTE: The Summary Reference Index is published once per year. As data are added to the CANSIM Main Base, amendments are published. If you would like your name added to our mailing list in order to receive amendments or if you require further information, please contact CANSIM (613-995-7406), Statistics Canada, Ottawa, Ontario K1A 0Z8.

¹ "CANSIM is the registered Trade Mark for Statistics Canada's machine-readable data base. When publishing any data retrieved from CANSIM, the following must be used as the source:

'These data originate from CANSIM which is the registered Trade Mark for Statistics Canada's machine-readable data base'."

HOW TO USE CANSIM REFERENCE MANUALS

As noted in the Introduction, time series identification numbers are necessary for data retrieval and manipulation. In a few cases, these identifiers are provided in the Bank of Canada Review or in the Statistics Canada publication in which the series are released in printed form, as shown in the following extract from the Canadian Statistical Review.

Databank Identification Numbers

If the publication does not list the required time series identification numbers, then they must be obtained from the CANSIM Main Base Series Directory. The "Guide to Effective Use of the CANSIM Main Base Series Directory" on Page iv illustrates the components of an entry in the Series Directory and explains the function of matrices, matrix headers, footnotes, CANSIM Identification Numbers, Databank Identification Numbers, etc. The CANSIM Main Base currently contains more than 275,000 time series, each of which is listed in this directory in matrix number order. The object, then, is to find the relevant matrix. This may be accomplished either by thumbing through the entire three volumes of the Main Base Series Directory or, more effectively, by referring to the Summary Reference Index.

The way in which the Summary Reference Index is to be used, will depend on the knowledge you bring to the search. If you know that Statistics Canada produces the series, you may also know the number of the catalogue in which the series is published. If so, refer to Appendix C of the Summary Reference Index which is a list of catalogue numbers of the Statistics Canada publications represented in CANSIM. If the publication is not listed, the required series is not available on CANSIM, and no further search of CANSIM documentation is necessary. If a publication is listed in Appendix C, this does not always mean that all data from that publication are available. Only a few summary series are available from some of the publications listed.

If the relevant publication is listed in Appendix C, or if you know that Statistics Canada produces the series but you do not know the number of the catalogue in which it is published, refer to the Table of Contents of the Summary Reference Index. While Appendix C provides information by catalogue number, the Table of Contents is organized by subject or area of interest. Read through the thirteen major subject areas listed and identify the one that is of interest to you. Each subject area is further divided into several subsections. Choose the subsection which seems most likely to include the data that you require. The subsection entitled "Canadian Statistical Review and Historical Summary" includes data from 150 catalogues pulled together and published in the Canadian Statistical Review; these publications are all listed separately in Appendix C.

Each entry in the Table of Contents includes the page number in the Summary Reference Index where the matrices available from the corresponding publication will be recorded. (Remember that a matrix roughly corresponds to a table in a publication). Matrices of seasonally-adjusted data are differentiated from those containing unadjusted data. Terminated matrices, that is, those for which updates have been discontinued, are indicated by an asterisk. Table numbers refer to the source publication.

If you want all available CANSIM data on a given subject, or in a given area of analysis, your first step is to refer to the Table of Contents of the Summary Reference Index and identify that subject or its closest counterpart among the categories provided. The remaining steps of the search procedure are the same as described above.

C. Real Domestic Product

NOTE: Historical Continuity

On the 1971 base, a continuous record from 1971 of Real Domestic Product and the Index of Industrial Production and their components may be obtained from the following Statistics Canada publication: corresponding data in constant prices are also available plus some data in current and constant prices for selected manufacturing industries.

Real Domestic Product by industry, (1971=100), (61-213), Annual

Indexes of Real Domestic Product by Industry, (61-005), Monthly

The same data are available in the following CANSIM matrices:

For the period prior to 1971, selected annual data are available on a 1971 base. The data are available in the following CANSIM matrix:

MATRIX

Annual Historical Indexes of Real Domestic Product by Industry, 1971=100	389*
---	------

To obtain a continuous record on a 1971 base, the indexes on a 1961 base must be mechanically rebased to 1971 by multiplying by 100.0 and dividing by the 1971 index value on a 1961 base. For 1971 and earlier years, Real Domestic Product and the Index of Industrial Production and the component indexes required for linking to the 1971 based series may be obtained from the following Statistics Canada publications:

Real Domestic Product by Industry, 1961 Base, (61-506), Occasional - for Real Domestic Product for the period from 1935 to 1960 and for the Index of Industrial Production for the period from 1919 to 1960.

Real Domestic Product by Industry, 1961-1971 (1961=100), (61-516), Occasional - Revised estimates of Real Domestic Product (RDP) by industry for the 1961-1971 period on an annual and sub-annual basis as well as showing some previously unpublished data for the service-producing industries.

Data for linking purposes can also be obtained for 1971 and the period prior to 1971 from the following CANSIM matrices:

III PRICES AND PRICE INDEXES(1)

REVISION BASED ON 1974 EXPENDITURES

Commencing with the October 1978 index, Canadian consumer price indexes incorporate the latest in a series of periodic revisions which characterize their development since the early 1900's. This latest revision features, among other things, the incorporation of updated weights based on 1974 urban expenditure patterns, replacing the 1967 urban family expenditure patterns (and within the food component, 1969 spending habits) used in the compilation during the May 1973 to September 1978 period.

To maintain the continuity of the series, the revised indexes were linked to the previously published indexes for September 1978. Thus the published indexes up to and including September 1978 remain the official measures of consumer price changes while subsequent price movements are measured by the revised indexes.

In the case of city indexes, certain series were revised historically to correct for methodological differences which previously existed in the construction of these series at the Canada and city levels. This has resulted in changes to the levels of certain city indexes dating back to January 1971.

Furthermore, certain series, at the Canada and city levels, were reconstructed historically to reflect more closely the Standard Commodity Classification system and the Family Expenditure categories of Statistics Canada.

The time reference base continues to be 1971=100.

Details on the latest weighting pattern and other background information on the revised Consumer Price Index are contained in the publication, The Consumer Price Index, Revision based on 1974 Expenditures, Concepts and Procedures, catalogue 62-546, occasional, price \$1.40, available from Publications Distribution Section, Statistics Canada, Ottawa, Ontario, K1A 0T6.

V MANUFACTURING AND PRIMARY INDUSTRIES(1)

A. General Review of the Manufacturing Industries of Canada, (31-203), Annual 1961-1971 (1960 SIC) Terminated, Canada only.

The concepts and definitions used are available upon request from Regional Statistics Section Manufacturing & Primary Industries Division.

Manufacturing industry data available in CANSIM have been compiled as defined for the 1969 Census of Manufactures. Certain head offices which in the earlier years have classified at the industry group level have over time been included with those head offices classified to individual industries; beginning with 1970 all head offices are classified to individual industries.

Series starting with a "5" have been terminated and are combined for all years with the corresponding industries in the series which begin with a "3". S.I.C. 107 is combined with S.I.C. 105. S.I.C.'s 1011, 1012 and 1013 are combined into S.I.C. 101. S.I.C.'s 1391 and 1392 are combined into S.I.C. 139. S.I.C. 3993 is combined with S.I.C. 3999.

The S.I.C. codes have been built into the series number in all cases.

V MANUFACTURING AND PRIMARY INDUSTRIES (concluded)

SECTION (B) Principal statistics of the manufacturing industries in Quebec, by major industrial group and sub-group, for Quebec as a whole, annual data since 1961

NOTE: The classification used for these matrices is the revised Standard Industrial Classification Manual of 1970. In order to obtain consistent chronological series from 1961 to 1972, some sub-groups have been aggregated to form a total of 157 industrial sub-groups. SIC codes have been integrated to series number in all cases. Basic data were taken from the Census of Manufactures tapes provided by Statistics Canada.

A. Industrial Corporations, Financial Statistics , (61-003), Quarterly

The quarterly financial statistics for Industrial Corporations from 1970 to first quarter 1978 inclusive which are in matrices 2781 to 2839 were terminated as of August 1978. This termination of matrices was caused by a major revision in the quarterly survey sample. You can have more information about this revision in the third quarter 1978 publication, Industrial Corporation - financial statistics catalogue 61-003.

As of third quarter 1978 you will be able to get the revised data created from that revision, in a new block of matrices (6781 to 6845).

Data for 1962 to 1970 which were in matrices 2333 to 2780, have been deleted from the CANSIM data base, but have been saved in a Statistics Canada data bank which you can access upon request through the Industrial Corporations Section, Business Finance Division.

STOCKS AND FLOWS OF FIXED NON-RESIDENTIAL CAPITAL IN CANADA.

1. 1960 SIC

The series given here represent annual estimates of the stocks and flows of fixed non-residential capital in Canada beginning with the year 1926.

The perpetual inventory method which underlies the present estimates starts with annual investment expenditures and estimates of the service lives of the assets. The capital stock estimates for a given year are obtained by accumulating past investment expenditures and adjusting them for the value of investment that has been used up (gross stocks) or adjusting them for the gradual wear and tear and the obsolescence they undergo during the time they are used (net stocks). A comprehensive description of the perpetual inventory method is given in Fixed Capital Flows and Stocks - Manufacturing - Canada 1926-1960: Methodology (13-522), Occasional.

The series are given by major industries according to the 1960 S.I.C., both in constant (1961) and current dollar valuation covering the following detailed types of components:

1. Building Construction
2. Engineering Construction
3. Machinery and Equipment
4. Capital Items Charged to Operating Expenses
5. Total Components

The component series are presented for the following categories of data:

NOTE:

The mnemonics appearing at the end of the series title of some 650 series in the Capital Stocks data block, serve to identify the component series of the CANDIDE model which is an undertaking of the Economic Council of Canada.

B. Capacity Utilization Rates In Canadian Manufacturing

The capacity utilization rates are given by major group according to the 1970 Standard Industrial Classification, by quarter from 1961.

The definition of capacity in this procedure is the maximum output obtainable under normal technological and market conditions.

The methodology used to produce these indexes is based on a comparison of the actual output of an industry during a certain time period with the estimated capacity output during that period.

The estimated capacity output is based on a capacity capital-output ratio derived from the industry's gross stock of fixed capital, measured in 1971 dollars. These capital stock estimates are produced by the National Wealth and Capital Stock Section of The Construction Division of Statistics Canada.

For concepts and detailed methodology please refer to Utilization Rates in Canadian Manufacturing, (31-003), Quarterly.

These indexes are available for the following list of industry levels:

1. Food and Beverages
2. Tobacco
3. Rubber and Plastics Products Industries
4. Leather
5. Textile
6. Knitting Mills
7. Clothing

C. Capital And Repair Expenditures On Construction

Source: Construction in Canada, (64-201), Annual. This series (1952-1978) provides annual estimates of capital and repair expenditures on construction, broken down by some 70 different structure types, crossclassified by province and sector. Included are final, preliminary, and forecast data.

For the most part the data are based on the Statistics Canada surveys of Capital Expenditures. From the same source, another publication Private and Public Investment, (61-205), Annual, reports the total capital and repair expenditure program, including outlays on machinery and equipment.

D. I Private and Public Investment in Canada, Outlook (61-205), Annual

The matrices listed below contain series representing Actual, Preliminary Actual and Forecast data for Capital and Repair Expenditures. For Mid-Year Forecasts see Private and Public Investment in Canada, Mid-Year Review (61-206), Annual. The Actual matrices begin in 1956, the Preliminary Actual and Forecast begin in 1973. The last two years in Actual matrices are current Preliminary Actual and Forecast.

The matrices for the provinces and territories also include data split between the private and public categories for Actuals beginning in 1963, Preliminary Actuals in 1976 and Forecasts in 1977.

For definitions and a brief description of the methods used to collect these data see Section V, Statistical Notes in Private and Public Investment, Outlook, (61-205), Annual.

D. II Private and Public Investment in Canada, Mid-Year Review (61-206), Annual

The matrices listed below contain series representing mid-year forecasts of capital expenditures. Repairs are not included since these data are not revised on our mid-year survey.

For information concerning our Actual, Preliminary Actual and Forecast data on CANSIM see Private and Public Investment in Canada, Outlook (61-205), Annual.

The Canada matrices begin in 1956 with the following exceptions Mining (1192) - 1963, Government departments (1220) - 1968, Private and Public (1224) - 1968, Public (1228) - 1968.

The Provinces and Territories can be retrieved from 1968 (the first year these breakdowns were compiled). Beginning in 1977 these matrices also include data, split between the private and public categories.

For definitions and a brief description of the methods used to collect these data see Section V, Statistical Notes in the publication.

B. Computer Service Industry, (63-222), Annual

Data are presented for companies primarily engaged in the computer services industry as well as for companies and institutions engaged in providing computer services to the public as a secondary activity. 1972 and 1973 data are comparable. In 1974 computer service companies were classified into two groups consisting of establishments primarily engaged in providing computer services and of establishments primarily engaged in sales and leasing or rental of ADP hardware.

The concepts and definitions used are available upon request from Merchandising and Services Division.

XII POPULATION(1)

A. Population Projections for Canada and the Provinces, 1976-2001, (91-520), Occasional

These are Statistics Canada second generation of population projections for Canada and the provinces. They supersede the previous ones which were released in 1974. They are generated by the Statistics Canada Population Projection Model (SCPM) using different hypotheses regarding future trends in fertility, mortality, immigration, emigration and inter-provincial migration. Four series are presented here, from Projections 1 to Projections 4; the base population is the 1976 Census population by age and sex. More information about the general methodology and assumptions is given in Population Projections for Canada and the Provinces, 1976-2001, (91-520), Occasional. Data by individual ages as well as components of growth are also contained in the Publication 91-520 as well as extensions of these projections at Canada level up to 2026.

B. POPULATION, CENSUS DIVISIONS & SUBDIVISIONS (historical)

The series comprises two tables. The first gives the population of the provinces and the territories back to 1901 Census as well as decennial increases. The second gives, for each Census taken since 1921, the population of the provinces, counties, census divisions, cities, towns, villages, municipalities and census subdivisions.

For a comprehensive description of boundary definitions pertinent to the census geographic areas tabulated refer to the source publications 1971 Census Catalogue 92-702 and 1976 Census Catalogues 92-802, 92-803, 92-804, 92-805.
